# SPRING SPECIALS

*Overview of services:*

## **Spring Aeration**

After a long, cold winter, your lawn needs some time to breathe. An aeration removes finger-sized plugs from your lawn - loosening compact soil and allowing nutrients, water and oxygen to penetrate the root system as new growth develops.

## **Emerald Ash Borer Treatment**

Emerald ash borer is considered the most destructive forest pest ever in North America. It is responsible for killing more than 50 million ash trees in 27 states. Across the front range of Colorado, 1 out of 6 trees are at risk. It was discovered in Boulder in 2013 and Longmont in 2016.

## **Lawn Fertilization**

A lawn needs everything we need to stay strong and healthy - food, water, oxygen. Our fall winterization program is essential to maintain your lawn's optimal health through the dry winter months, and encourages strong growth in the early spring.

## **Home Insect Control**

No one likes bugs crawling inside their house. Our home insect control program provides an exterior perimeter application to make sure bugs stay where they're supposed to - outside.
