

Summer Lawn Program

Your summer application of specially blended fertilizer contains an increased amount of potassium which helps the lawn recover from stress brought on by the summer's warm temperatures. Broadleaf weed control has been applied as needed.

Watering:

Please refrain from watering for 30 minutes after the application. A light rain will not affect this application. When possible, complete all watering between 6 and 8 am. Avoid over-watering shady areas. With hot dry weather your lawn requires more water. Brown or dry areas in the lawn are commonly the result of dry areas. These areas will need additional watering for 5-7 days. If brown areas persist after extra watering, please call Swingle for a free courtesy visit to evaluate the cause of the problem.

Mowing:

During periods of high summer heat it is very important to maintain your mowing height of 2 1/2" to 3". Continue to ensure that your mower's blades are sharp to prevent plant tops from tearing and turning brown.

Cultural Notes:

Piles or rows of clipping left on the lawn after mowing will need to be picked up. This will ensure the lawn receives enough sunlight and oxygen.

Your next lawn application:

Your next application will be in 5-7 weeks.
