

Bed & Border

Swingle's Bed & Border Program

Beautiful beds and colorful borders are the frame for your home and a source of pride for you. Weed control is important. Common Colorado weeds like dandelion, bindweed, spurge, mallow, crabgrass, and foxtail can overtake the plants in your landscape beds. Our frequent series of hot, dry days followed by thunderstorms are conducive to weed growth.

Walkways and driveways are expensive to install. Weeds crack the foundation and force their way to the surface, spoiling the appearance and the foundation of your investment. You've put hard work into designing, preparing, planting and pruning your ornamental beds and borders, driveways and walkways.

Don't let those weeds spoil your hard work! Get a weed control system and ensure your beds, borders and walkways are healthy, beautiful and weed-free.

Our proven application works with great results on the following types of rock and mulch beds:

- Mulched areas
- Pathways, walkways and driveways
- Low-growing evergreen beds
- Crushed rock

Your home's outdoor space is a source of pride, property value and lifelong memories. Enjoy it! Get a long-term professional partner who understands how to make your home's landscape thrive in Colorado's climate. Get your outdoor space healthy, beautiful and weed-free.
