

Fertilization

The 5-Time Lawn Care Program is a convenient, hassle-free solution, which guarantees you a beautiful, green, weed-free lawn.

This program includes five scheduled visits by a certified Swingle technician throughout the season:

Early Spring:

Fertilization; pre-emergent for crabgrass and spurge control. Weed and insect control as needed.

Late Spring:

Fertilization; pre-emergent continued for crabgrass and spurge control. Weed and insect control as needed.

An optional granular treatment providing 12-month protection from Japanese beetle grubs is available at an additional cost.

Summer:

Slow release fertilizer with micronutrients. Weed and insect control as needed.

Late Summer:

Fertilization; weed and insect control as needed. This application helps lawns recover from summer heat stress.

Fall:

Fall's final winterizing fertilization is absorbed into the roots and stored throughout the winter season. Weed and insect control as needed.

Swingle offers free courtesy visits for any problems or concerns you may have with your lawn.
