

ReCharge™

Supplemental Watering:

When trees and shrubs don't get adequate water all sorts of damaging things can happen to your landscape. It becomes stressed and stressed plants are more susceptible to insects and disease. Leaves or needles can drop. Trees that cost hundreds or thousands of dollars to replace can suddenly go into decline if the critical water shortage is not corrected.

Solution:

Supplemental watering is the solution to ensure your trees and shrubs receive the needed amount of water to stay vibrant and healthy. We call it ReCharge™, a mixture of water and Yuccah™ natural plant extracts that provides moisture to the soil and enables your landscape to stay healthy.

When you authorize ReCharge™ watering we monitor moisture levels and schedule the service as necessary. When moisture levels are up we will skip the service and let you know.
