

Treat & Inspect

Our "Treat and Inspect" program is designed to protect your valuable trees and shrubs from Aphids, Spider mites and Caterpillars (A,SM&C). We recommend three to four applications per year to ensure protection during the infestation period.

A two step approach, providing the utmost in plant protection with minimum environmental impact.

The "Treat" Phase:

We treat "primary" trees and shrubs that are most likely to be damaged by (A,SM&C) surrounding the time frame of each treatment. Two application methods (foliar and soil injection) are utilized to protect your plants.

The "Inspect" Phase:

The remaining trees and shrubs will be inspected for (A,SM&C) every time. Any trees or shrubs that are infested will be automatically treated AT NO ADDITIONAL CHARGE*. Fruit trees on your property will also be inspected, but will not be treated unless we have your prior permission.

Our Guarantee:

Each treatment is guaranteed for 30 days. Otherwise we will re-treat at no additional charge or refund the cost...your choice.

* Deciduous (leafy) shade trees over 30 feet tall may require a separate treatment under our specialized target applications.
